

疊格排版

事業部規劃

incentive

An auxiliary unit of TeX service providing typeset specialty to the website group and to the gyro simulation group. This unit also provides customized TeX service to other business.

未完成方向

1. 應用 subdoc 讓 case_g20.tex 及其他可以獨立運行，就不用去擔心編譯時期相對路徑找不到檔問題。
2. share community, tikz, LYX doc, ...
3. Math.lyx 與.pdf 清楚化 ●●●○
4. LYX 做 webpost 時的標題列 css 模組化 ●○○○，目前是用 python 做代換。
5. sciencefair typeset conti.●●●○
6. 將疊格繪圖方程 modulize.●●○○

還需思考的未完成項目

1. LYX mailing list post suggestion on align environment. Check dev group on this.
2. LYX export 包含有被伺服圖檔的 html 檔，目前已有一寫下的流程，但還是要做成自動化較方便。
3. vec A 不對稱問題？
4. 順著陀螺外型的 powered by LYX SW 字串，初步雛型已出來，需要 finish off。●●●○

可直接進行的未完成項目

1. openGL coordinate 圖加入 annotate docs.
2. 加入 tikz 說明書，node position，anchor 參數必須要在 above right 之類參數之後才會有效。去 github fork 先 report issue，然後加說明書？

特色

1. 使用 LYX 與 SW 來產生最高品質 pdf 文件。
2. 高度自動化 (省下很多細微瑣碎步驟)。
3. 結合不同程式與軟體來做多方應用，如網站建立，網頁編輯，資料庫建立，圖形繪製等。

LYX 特殊客製化紀錄

1. 在 LYX 中直接加入 ScriBD 的 pdf preview 視窗指令，LYX export html 後即可成為一具有 Scribd pdf 預覽視窗的網頁。範例請見網站的疊格服務介紹網頁。
 - (a) 步驟: 使用 LYX 的 program listing 指令，在指令中貼上 Scribd 的 embed pdf 指令，存檔。使用 LYX 的 export html 指令，我有新增一複製指令，所以 html 檔除了存在原本檔案位置，也會存到 django 的 template 資料夾。去 template 夾中，打開 LYX2HTML_str_replace.py 檔，確認 fname 是該 html 檔名，關閉 py 檔。執行 python LYX2HTML_str_replace.py 檔。

SW 特殊客製化紀錄

1. 在 SW 中若要加入連結，由於 SW 本身的 inserted hypertext 所插入的 msihyperref 指令在 xelatex 下編譯會多產生兩個??，因此只好用平常的 hyperref 指令，並且這樣的話也可以很方便的把連結加顏色換型變得很漂亮。不過這樣的話以後要輸入就要去複製一個平常的 hyperref 指令，然後更改其中的連結成想要的。是有點麻煩，之後再想辦法。

last 10 git commits

2018-01-02 add mymakelatex.bat

2018-01-02 Added py script to remove `begin{tikzpic}` line in lemma4fig4 now saved so that it can be used in sphinx annotate docs.

2017-12-31 Organizing files(delete)

2017-12-26 Annotate program add a function to offset curve. Gyroprofile_add_curved_test.py now successfully output offset curve. And a nice text-along-curve logo can be easily achieved. Still need to finish it off.

2017-12-15 Organizing files part 2.

2017-12-15 Rename python_drawcode folder. Organizing files part 1.

2017-12-14 logoprofile set equal aspect ratio. Fix package import. Rename annotation module. Unify the setting of coordinate (scaley).

2017-12-13 draw doc add fig. Track files in drawing_code folder, which is moved from the script folder.

2017-12-12 forgot to add bg_gyro.png. This is a straight up gyro that can be aligned with the curved text generated by the gyrologodraw11 program. The quality of this png file needs to be improved.

2017-12-12 Big progress on curved text along logo. Make good use of the power of tikzpgf. Next to increase the quality of the png gyro. Create ancestor_veneration with mosaic of pompeii.

2017-12-11 dev flowchart add folder tree. Add tex logos_creation folder and files. Initial success on text along path, but don't know how to match coordinate of curved text to that of png logo.

2017-12-08 Incorporate python list dir as tree function and latex menukeys and forest packages into making a directory tree graph for gs folder.

2017-12-08 Try making directory tree for gs project, using suggestion of latex menukeys package from stackexchange. The result looks good.

2017-12-07 Abandoned anaconda and directly installed python27
. Used pipenv to manage packages. Successfully created geometry annotation documentation with sphinxcontrib-tikz, showing nice graphs using pgf graphics generated by my 3d geometry annotating python program.

Still need to replace all png figures with their pgf code.

2017-12-04 Rename folder and make file name the same as the folder.
